The samples to be analyzed (2ml of supernatant) will be stored at 4°C until delivered to the SCCA central laboratory. Only sampled will be received in hermetically closed tubes, avoiding those whose opening could cause splashes.

**For DNA staining, 2ml samples will be collected until 12:00 a.m. on Wednesday of each week. Samples received later will be analyzed the following week. The first sample includes control sample and the test plate.

***For PCR, samples collected until Thursday at 12:00 a.m. will be analyzed weekly. The first sample includes controls, markers and agarose gel.
